

MobileDeviceController (MDC) is the most powerful solution of its type, offering a unique set of features designed for remote Android device administration. Customers all around the world have been empowered by the system, controlling thousands of devices from an easy to use browser interface.

Key features include...

Made For Android

MobileDeviceController is a solution designed for Android devices such as smartphones, tablets, set top boxes and a growing number of bespoke products.

Cloud Based SAAS

MDC is a Cloud Based Software As A Service solution, so there's no complicated setup, no need for onsite servers and minimal financial outlay.

Device Management

The Device Manager provides an overview of your assets and granular control of, and interaction with each individual device.

App Management

MobileDeviceController provides sophisticated app management including deployment, install and uninstall functionality, and automated white list monitoring.

LiveView

LiveView makes it possible to see a device's graphical output and interact with its interface in realtime, making support quick and easy.

Multi User Support

MobileDeviceController offers admin defined multi-tier access to accounts, system features and data.

Location Service

The location service indicates the position of a device on a map using available GPS, network or IP address data.

Push Messaging

Text and graphical messages can be pushed to individual, groups or all devices within an account, and user acknowledgement can be recorded.

Statistics

Statistics are available for the past hour, day, week and month for CPU usage, RAM usage, storage usage, online connectivity and network traffic.

System Logs

All user interactions within the MDC portal are logged by the system, providing a comprehensive audit trail.

3rd Party Integration

All or part of the MobileDeviceController can be integrated into other systems, and bespoke user interfaces can be created to meet specific user requirements.

Assured Security

MobileDeviceController offers end to end security through its proprietary software that utilises 128bit encryption.
